No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 aaggttgtgcgagagaccaa......tttgttacttcccatgttaa 154
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence Sequence Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pending Patents_NA New:*

                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                     This sequence represents the cDNA sequence cloned into the E. coli cassette vector pMON2317 to generate vector pMON22652. The cDNA encodes the antifungal polypeptide AlyAFP, isolated from plants of the genus Alyssum. The AlyAFP polypeptide can be used to control phytopathogenic tungi, whilst the coding DNA can be used to produce transgenic plants that express the polypeptide making them resistant to the phytopathogenic fungi
                                                                                                                                                                                                                                                                                                  168

                                                                                                                                                                                                                  This sequence encodes the mature protein of an antifungal polypeptide (Alyarp) isolated from plants of the genus Alyssum. The sequence was PCR amplified using primers AAT94583-T94584, and the resultant 264 bp fragment was cloned as a Bandl fragment into the expression vector pMON23317 to generate plasmid pMON22652. The Alyarp sequence in this plasmid is placed under control of an E35S promoter and the maize HSP70 intron I sequence. The protein can be used to control phytopathogenic fungi, whilet the DNA can be used to produce transgenic plants that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                rungı, whilst the DNA can be used to produce transgenic plants that express the protein making them resistant to the phytopathogenic fungi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 ArgleuCysGluArgProSerGlyThrTrpSerGlyValCysGlyAsnAsnAsnAsnAlaCys

                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the cDNA sequence which encodes the antifungal polypeptide AlyAFP, isolated from plants of the genus Alyssum. The AlyAFP polypeptide can be used to control phytopathogenic fungi, whilst the coding DNA can be used to produce transgenic plants that express the polypeptide making them resistant to the phytopathogenic fungi

This sequence represents the cDNA sequence encoding the antifungal polypeptide AlyAFP, from plants of the genus Alyssum. The sequence represents a composite of the sequences isolated by 5' and 3' RACE (Rapid Amplification of cDNA Ends) methods (see AAF94577) and AAF94580). The AlyAFP polypeptide can be used to control phytopathogenic fungi, whilst the coding DNA can be used to produce transgenic plants that express the polypeptide making them resistant to the phytopathogenic fungi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel protein from Brassica campestris, useful as antimicrobial against plant pathogenic filamencous fungi or pathogenic bacteria, especially for treating e.g. rice white leaf blight and sheath blight disease.
                                                                                                                                       The invention comprises the amino acid and coding sequences of antimicrobial (defensin) proteins from Brassica. The DNA and protein sequences of the invention are useful for producing transformed plants with composite disease resistance, especially resistant to diseases caused by pathogenic bacteria, such as: rice white leaf blight, brownstripe disease, glume blight, and seedling damping-off disease. As well as diseases caused by filamentous fungi, such as: rice blight, sheath blight disease, and leaf blight. The present DNA sequence encodes a Brassica defensin protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21 ArgAsnGlnCysArgAsnLeuGluArgAlaGluHisGlySerCysAsnTyrValPheFro

This cDNA represents the sequence of Rs-AFP1 from Raphanus sativus. PCR primer AAQ38640 was used together with AAQ38641 to generate a probe for primer AAQ38640 was used together with AAQ38641 to generate a probe for common acids 2 to 7 of Rs-AFP1 and has a sense orientation. The 144bp coduct was partially re-amplified using AAQ38642 and AAQ38641 to give a product, which was further reamplified with the same primers and 123bp product, which was used to GTTP to give a digoxigenin-11-dUTP instead of GTTP to give a digoxigenin labeled PCR cigoxigenin-11-dUTP instead of GTTP to give a digoxigenin labeled PCR compared by pridisation. Positive plaques were purified and subjected to two additional screening rounds with the same probe. Inserts were excised in vivo into the pBluescript phagemid form with the aid of halper phage their size compared by agarose gel electrophoresis. Four clones had inserts of insert sizes of approx. 400bp the others between 250-300bp. The inserts compared by agarose gel electrophoresis. Four clones had compared and found to differ only in the length of their S' and 3' UTR's. The longest sequence is given here.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antimicrobial; Rs-AFP1; symbiosis; disease-resistance; fungus-resistance; Clavibacter xyli subsp. cynodontis; Cxc; crop improvement; endophyte; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                    Antifungal peptide derived from radish antifungal protein 2 - and related DNA, useful for producing plants with increased fungal resistance and as therapeutic or preservative agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This cDNA sequence encodes an Rhapanus sativus (radish) antifungal protein (Rs-AFP1). Analogues of the homologous protein, Rs-AFP2 (AAM19281), have also been produced (see AAM19282-92, AAM1928-94, AAM19281). Have also been produced (see AAM19282-92, AAM1928-94, AAM1930-104, AAM1930-134, and AAM31765-834). Plants containing DNA sequences encoding these proteins have improved resistance to fungi. Compositions containing the peptides can be used to control fungi or preservative purposes (as food additives). In agriculture, the peptide may be used to improve disease resistance or disease tolerance of crops, either pre or post harvest. When applied to plants they may also have curative as well as protective actions. The peptides may also be used to protect plants by introducing them, or a microorganism capable of expressing the peptide into the soil. (Updated on 25-MAR-2003 to correct

                                                                                                                                                                                                                                                                                                                                                                                            plant-derived antimicrobial proteins are expressed in endosymbiotic Clavibacter xyli subsp. cynodontis (Cxc). Plants or seeds treated with recombinant Cxc are protected against fungal disease. A suitable antimicrobial protein is Rs-AFP1 from R. sativus. The full-length cDNA sequence of Rs-AFP1 is given in AAQ70128. (Updated on 25-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 ArgleuCysGluArgProSerGlyThrTrpSerGlyValCysGlyAsnAsnAsnAlaCys

This cDNA clone codes for the preprotein for radish antifungal protein 1 (Rs-AFP1) (AAW19617). Novel antifungal proteins are based on Rs-AFP1, Rs-AFP2 (see AAW19616), Rs-AFP3 and Rs-AFP4, especially those in which Gly9 is repaced by Arg, Val39 by Arg, Gly9 by Arg, Glu5 by Met and/or Gly9 Met. Mutants (see AAW26371-90) of Rs-AFP2 are specifically claimed. The mutants show improved salt tolerant antifungal activity, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 ArgleuCysGluArgProSerGlyThrTrpSerGlyValCysGlyAsnAsnAlaCys
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      106 AAGTIGIGGAAAGGCCAAGTGGGACAIGGICAGGAGTCTGIGGAAACAAIAACGCAIGC
                                                                                                                                                                                                                                                                                                                                                                                                                                                 New active mutants of radish antifungal protein 2 - used to generate fungus-resistant plants or as therapeutic or preservative agents.
                                                                     Rs-AFP1; radish antifungal protein 1; fungicide; salt tolerance; preservative; transgenic plant; crop protection.

Novel protein from Brassica campestris, useful as antimicrobial against plant pathogenic filamentous fungi or pathogenic bacteria, especially for treating e.g. rice white leaf blight and sheath blight disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises the amino acid and coding sequences of antimicrobial (defensin) proteins from Brassica. The DNA and protein sequences of the invention are useful for producing transformed plants with composite disease resistance, especially resistant to diseases caused by pathogenic bacteria, such as: rice white leaf blight, brownstripe disease, glume blight, and seedling damping-off disease. As well as diseases caused by filamentous fungi, such as: rice blight, sheath blight disease, and leaf blight. The present DNA sequence encodes a Brassica defensin protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                91 AAGTTGTGCGAGAGGCCAAGTGGGACATGGTCAGGAGTCTGTGGAAACAATAACGCATGC

Protecting plants against pathogens by inducing defensin genes - by stimulating ethylene or jasmonate pathways, also new promoter of defensin gene from Arabidopsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence encodes the Arabidopsis PDF1.1 gene which is used in a novel method for the protection of plants against pathogens which involves inducting expression of a plant defensin gene by stimulating the jasmonate and/or ethylene pathways. The method is used to induce protection against necrotrophic pathogens, specifically fungi and does not require cytotoxic or potentially harmful chemicals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          176 AAGAATCAGTGCATTAACCTTGAGAAAGCACGACATGGATCTTGCAACTATGTCTTCCCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         150

Example 21; Fig 35; 110pp; English.

This cDNA represents the sequence of Rs-AFP2 from Raphanus sativus. PCR primer AAQ38640 was used together with AAQ38641 to generate a probe for primer AAQ38640 was used together with AAQ38641 to generate a probe for screening a Raphanus sativus seed cDNA library. This primer corresponds to amino acids 2 to 7 of Rs-AFP1 and has a sense orientation. The 144bp product was partially re-amplified using AAQ38642 and AAQ38641 to give a 133bp product. Which was further reamplified with the same primers and digoxigenin-11-dUTP instead of dTTP to give a digoxigenin labeled PCR product. This was used to screen a lambda ZAPII cDNA library by in situ product. This was used to screen a lambda ZAPII cDNA library by in situ plaque hybridisation. Positive plaques were purified and subjected to two plaque hybridisation positive plaques were excised by RcoRI digestion and vivo into the pBluescript phagemid form with the aid of halper phage cribers is zec compared by agarose gel electrophoresis. Four clones had contained to their accordance and found to differ only in the largest captence was identified as Rs-AFP1 so the Rs-AFP2 was seen to differ by only 2 amino acids from Rs-AFP1, so the Rs-AFP2 was seen to differ by only 2 amino acids from Rs-AFP1, so the Rs-AFP2 was seen to differ mutagenesis. (Updated mutagenesis. (Updated on 25-MAR-2003 to correct PN field.)

Alignment Scores:

Plant-derived antimicrobial proteins are expressed in endosymbiotic Clavibacter xyli subsp. cynodontis (Cxc). Plants or seeds treated with recombinant Cxc are protected against fungal disease. A suitable antimicrobial protein is Rs-AFPI form. sativus. The full-length cDNA sequence of PCR assisted site-directed mutagenesis of Rs-AFP2 is given in AAQ70130 and the deduced amino acid sequence in AAR57327. (Updated on 25-Antimicrobial; Rs-AFP2; symbiosis; disease-resistance; fungus-resistance; Clavibacter xyli subsp. cynodontis; Cxc; crop improvement; endophyte; PCR; polymerase chain reaction; mutagenesis; ss. Antimicrobial protein producing endo-symbiotic microorganisms - is produced by combining nucleic acids encoding the protein with an endophyte, useful for protecting plant hosts from esp. fungal disease. 1 ArgleuCysGluArgProSerGlyThrTrpSerGlyValCysGlyAsnAsnAsnAlaCys G; 83 T; 0 U; 0 Other 288 43 4 261 443 00 00 Length: Matches: Conservative: Length: Matches: Conservative: Mismatches: Indels: 41 AlaHisLysCysIleCysTyrPheProCys Gaps: US-10-681-972-2 (1-50) x AAQ38652 (1-261) Disclosure; Page 33; 39pp; English. 70 A; 66 C; 69 BP. Sequence 14, Application US/08627706

Patent No. 5773696

PAPELICANT: Liang, Jihong

APPLICANT: Shah, Dilip M.

APPLICANT: Rosenberger, Cindy A.

TITLE OF INVENTION: Antifungal Polypeptide and Methods for TITLE OF INVENTION: Controlling Plant Pathogenic Fungi

NUMBER OF SEQUENCES: 19

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADDRESSEE: Charles E. Cohen, Monsanto Company, BB4F

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                               (without alignments)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 9, Application US/09829381D

Patent No. 6653280

GENERAL INFORMATION:
APPLICANT: Liang, Jihong
APPLICANT: Liang, Jihong
APPLICANT: Shah, Dilip M.
APPLICANT: Rosenberger, Clidy A.
ITILE OF INVENTION: Antifungal Polypeptide ALYAFP from Alyssum and Methods for Control TITLE OF INVENTION: Dilip M. Yamide S.
TITLE OF INVENTION: Plant Pathogenic Fungi,
TITLE OF INVENTION: Dilip M. Yamide S.
TITLE OF INVENTION: Dilip M. Yamide S.
TITLE OF INVENTION: Dilip M. Yamide S.
TITLE OF INVENTION: Dilip M. Yamide S.
TITLE OF INVENTION: Dilip M. Yamide S.
TITLE OF INVENTION: Dilip M. Yamide S.
